DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20 are drawn to a malware detection system by comparing a normalized signature to a normalized malware signature stored in a malware signature store, classified in class 726, subclass 22 (Monitoring or scanning of data including attack prevention).
 - II. Claims 21-22 are drawn to a malware detection system by modifying (renaming) variables and subroutines of the executable script, classified in class 713, subclass 187 (computer program modification detection).
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they don't overlap in scope and are not obvious variants, and if it is shown that at least one subcombination are separately usable. In the instant case, the malware signature stored in a malware signature store in subcombination I can be utilized in scanning of data including attack prevention and the second subcombination (subcombination II) is utilized in computer program modification detection. See MPEP 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purpose as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point

out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Should the applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over prior art, the evidence or admission may be used in a rejection under 35 U.S.C 103(a) of the other invention.
